THIS DOCUMENT CONTAINS INFORMATION AFFECTING THE NATIONAL DEFENSE OF THE UNITED STATES, WITHIN THE MEANING OF TITLE 18, SECTIONS 793 AND 794, OF THE U.S. CODE, AS AMENDED. ITS TRANSMISSION OR REVELATION OF ITS CONTENTS TO OR RECEIPT BY AN UNAUTHORIZED PERSON IS PROHIBITED BY LAW. THE REPRODUCTION OF THIS FORM IS PROHIBITED.

THIS IS UNEVALUATED INFORMATION

25X1X

25X1X 1. Pharmaceuticals which were unobtainable in Czechoslovakia included diethyl barbituric acid, aspirin, codeine, atropine, and digitalis. No syrups were available for use as drug sweeteners. Morphine was in good supply because it was under strong control by the government. Ergot products were formerly imported, but the source was cut off, and farmers in Czechoslovakia were being encouraged to cultivate the plant source as a new crop.

2. Injections of Czech penicillin were extremely painful. Novocain was used along with the penicillin, and, in my opinion, this was only to relieve the pain of the injection. It is my opinion, although as far as I know it is not shared by anyone else, that the average Czech worker at the penicillin plant is making no effort to improve the quality of the product. I think they would prefer to have Czech factories produce inferior penicillin rather than have the Communist regime score a success by manufacturing a highly purified product.
